

FUTURE WARS

The year is 2125

World War 3 changed everything:

- Entire third world nations have gone dark.
- The human population decreased by one third.
- The major world powers are reeling from massive losses in resources and manpower.
- The world wide web is owned and controlled by a secret organization that controls news, exchange of information and funds between countries.

Pre-War Tensions

By the mid-21st century, geopolitical tensions had reached a boiling point. Resource scarcity, climate change, and territorial disputes created fractures among the world's leading nations. The fragile balance of power was strained further by emerging technologies and cyber warfare capabilities.

Outbreak of World War III

World War III began in 2079, sparked by a cyber-attack on a major financial institution that led to economic collapse in several countries. Allegations and counter-allegations fueled the conflict, quickly escalating into full-scale war. Alliances were formed, pitting the Eastern powers (led by China, Russia, and their allies) against the Western powers (comprising the United States, European Union, and their allies).

The War's Devastation

The war saw unprecedented destruction. Entire cities were leveled by advanced weaponry, and both sides deployed cyber warfare tactics, crippling critical infrastructure. The use of A.P.E. suits and autonomous military units became commonplace, transforming the nature of ground combat.

- **Nuclear Strikes:** Despite numerous international treaties, tactical nuclear weapons were used, causing catastrophic damage and loss of life. The fallout rendered many areas uninhabitable, contributing to a significant decrease in the global population.
- **Biological and Chemical Weapons:** Deployed in desperate attempts to gain advantage, these weapons led to widespread illness and long-term environmental damage.

The Final Days and Aftermath

The war concluded in 2085, not with a decisive victory, but through mutual exhaustion. The global economy was in shambles, and nations were left to rebuild from the ashes. The massive losses in resources and manpower created power vacuums and instability worldwide.

The Rise of Corporations

In the chaotic post-war period, corporations saw an opportunity. Offering security, infrastructure, and advanced technology, they stepped in to fill the void left by weakened governments. Private Military Corporations (PMCs) thrived, eventually taking on roles traditionally held by national militaries.

- **Ogama Corp.** was the first to field privatized A.P.E. suits, setting a precedent for others to follow. Their “Ogre” suits became synonymous with power and fear.
- **Perseus Solutions** developed the “Cottonmouth” suits for the United Front, demonstrating the effectiveness of lighter, agile units in covert operations.

Control of the Web

A secretive organization emerged, seizing control of the world wide web. They became the gatekeepers of information, manipulating news, communications, and financial transactions. Nations and corporations alike found themselves under this shadowy entity's influence.

The Corporations' Power

By 2125, corporations such as Novatech Industries, Aether Dynamics, EuroForce Systems, RedStar Consortium, SinoTech Corporation, Nihon Industries, Bharat Dynamics, and AustralCorp had become the true power brokers. Their control extended over not just technology and resources, but also global politics and societal norms.

Modern-Day Setting

The world of 2125 is one of stark contrasts. Gleaming corporate enclaves stand amid ruins, advanced technology coexists with post-war devastation, and the struggle for power continues on new fronts. The A.P.E. suits symbolize this era, representing both hope and fear, as they are wielded by those who seek to shape the future.

Notable Battles after WWIII:

Battle of New Cairo (2090)

Corporation: Novatech Industries **PMC:** NovaGuard

Details: In the aftermath of WWIII, New Cairo became a strategic hub for controlling the Nile's water resources. Novatech Industries deployed NovaGuard to secure the city against insurgent forces. The "Balor" suits played a crucial role,

using their heavy armor and integrated weaponry to break through enemy defenses. The suits' AI targeting systems allowed for precise strikes, minimizing collateral damage and ensuring a swift victory.

Siege of Berlin (2095)

Corporation: Aether Dynamics **PMC:** Eagle Squadron

Details: Berlin, a key European city, was under siege by rogue factions. Aether Dynamics sent Eagle Squadron to reclaim the city. The "Arthur" suits, with their adaptive camouflage and enhanced mobility, excelled in urban warfare. The energy shields provided crucial protection during close-quarters combat, and the multi-tool gauntlets allowed for quick hacking of enemy systems and field repairs.

Operation Iron Curtain (2100)

Corporation: EuroForce Systems **PMC:** Iron Legion

Details: In Eastern Europe, a coalition of rebel groups threatened to destabilize the region. EuroForce Systems deployed Iron Legion to restore order. The "Perun" suits, equipped with thunderstrike hammers and heavy ballistic shields, led the charge. Their thermal imaging capabilities allowed them to detect and neutralize hidden threats, ensuring the operation's success.

Battle of the Arctic Circle (2105)

Corporation: RedStar Consortium **PMC:** Stellar Guard

Details: Control over the Arctic's untapped resources became a major point of contention. RedStar Consortium's Stellar Guard was tasked with securing key locations. The "Dobrynya" suits, with their stealth mode and jet propulsion, excelled in the harsh, icy terrain. Their precision gauntlets and enhanced sensory suite allowed for effective sabotage of enemy installations.

Conflict in the Gobi Desert (2110)

Corporation: SinoTech Corporation **PMC:** Dragon Warriors

Details: The Gobi Desert became a battleground for control over rare earth minerals. SinoTech Corporation deployed Dragon Warriors to secure mining operations. The "Zhong Kui" suits, with their nanite regeneration and shockwave generators, proved formidable. The heavy flamethrowers were particularly effective in clearing out enemy fortifications, and the advanced targeting HUD ensured precise strikes.

Skirmish in Tokyo (2115)

Corporation: Nihon Industries **PMC:** Samurai Squad

Details: Tokyo, a major technological hub, faced threats from corporate espionage and sabotage. Nihon Industries' Samurai Squad was deployed to protect critical infrastructure. The "Musashi" suits, with their kinetic amplifiers and holographic decoys, excelled in the dense urban environment. The silent movement capabilities and katana blade made them deadly in close-quarters combat.

Defense of Mumbai (2120)

Corporation: Bharat Dynamics **PMC:** Varuna Commandos

Details: Mumbai, a key port city, was under threat from pirate factions. Bharat Dynamics deployed Varuna Commandos to defend the city. The "Kali" suits, with their quad-barrel railguns and force field generators, provided overwhelming firepower. The hydraulic crushers and battlefield medic suite ensured both offensive and defensive capabilities, securing the city's safety.

Battle of Sydney Harbor (2121)

Corporation: AustralCorp **PMC:** Outback Rangers

Details: Sydney Harbor, a vital trade route, was targeted by hostile forces. AustralCorp's Outback Rangers were tasked with defending the harbor. The "Bunjil" suits, with their desert adaptation and solar recharging, were well-suited for prolonged engagements. The long-range scanners and rapid deployment gear allowed for effective reconnaissance and swift response to threats.

The Corporations

In tragedy and despair there is always money to be made:

- Corporations across the world saw the immediate need for security and infrastructure for nations rebuilding from global war.
- Private Military Corporations grew and thrived in the absence of large standing militaries.
- Initially engaging in defensive interests of the nations they were contracted with, then escalating into full invasion operations into enemy territories.
- Over time these Corporations became powerful and influential that they started to dictate to the countries they “served” on where and when territories were taken.
- Massive technological advances were also made by these corporations and their PMCs.

United States - Novatech Industries

- **Background:** Originally a defense contractor, Novatech Industries transitioned to cyber-security and AI development after World War III. They dominate critical infrastructure, digital security, and bio-engineered enhancements.
- **Influence:** Novatech's control over cyber security positions them as gatekeepers of information, and their AI algorithms manage societal trends, granting them significant political and economic power.
- **PMC Units: NovaGuard** - Elite units equipped with advanced cybernetic enhancements and AI-driven tactics, specializing in both defense and covert operations.

Britain - Aether Dynamics

- **Background:** Aether Dynamics began as a leading renewable energy company and expanded into biotechnology and synthetic food production post-war, vital for the nation's survival.
- **Influence:** Holding patents on advanced renewable energy sources and synthetic foods, Aether Dynamics is critical for energy and food security in Britain and globally.
- **PMC Units: Eagle Squadron** - Highly trained forces using cutting-edge biotechnology to enhance soldiers' physical and cognitive abilities.

Eastern Europe - EuroForce Systems

- **Background:** Formed from a coalition of tech companies and surviving governments, EuroForce specializes in advanced robotics and autonomous systems for civil and military use.
- **Influence:** Their autonomous systems control everything from public infrastructure to private military operations, making them incredibly influential.
- **PMC Units: Iron Legion** - Robotic and semi-autonomous units that provide both logistical support and frontline combat capabilities.

Russia - RedStar Consortium

- **Background:** Originally an aerospace and defense giant, RedStar diversified into space colonization and resource extraction, controlling several off-world colonies and asteroid mining operations.
- **Influence:** Their monopoly on space resources and colonies provides them unparalleled leverage over terrestrial nations.
- **PMC Units: Stellar Guard** - Units specialized in space-based operations and extraterrestrial resource protection.

China - SinoTech Corporation

- **Background:** SinoTech emerged as a leader in nanotechnology and genetic engineering, focusing on human enhancement and environmental restoration technologies post-war.
- **Influence:** SinoTech's advancements in nanotech and genetics make them essential for rebuilding and enhancing human capabilities, influencing global health and environmental policies.
- **PMC Units: Dragon Warriors** - Units enhanced with nanotechnology and genetic modifications, offering superior combat effectiveness and resilience.

Japan - Nihon Industries

- **Background:** Nihon Industries started as a robotics and electronics manufacturer, expanding into AI-driven healthcare and urban development after the war.
- **Influence:** Their innovations in smart cities and healthcare are adopted worldwide, controlling urban living standards and public health.
- **PMC Units: Samurai Squad** - Units utilizing advanced robotics and AI, excelling in both urban warfare and tactical support.

India - Bharat Dynamics

- **Background:** Bharat Dynamics began as a pharmaceutical and agritech leader, shifting towards sustainable agriculture and climate adaptation technologies post-war.
- **Influence:** Their control over food production and climate technologies positions them as key players in global food security and environmental resilience.

- **PMC Units: Varuna Commandos** - Units trained for environmental warfare and disaster response, using advanced agritech and bio-enhancements.

Australia - AustralCorp

- **Background:** Initially focused on mining and resource extraction, AustralCorp transitioned to renewable energy and desalination technology after the war.
- **Influence:** Their expertise in renewable energy and water resources is crucial for addressing global resource shortages and environmental challenges.
- **PMC Units: Outback Rangers** - Units specialized in resource protection and environmental security, utilizing advanced renewable energy-powered gear.

The MEDIA

The American News Network (ANN)

- **Coverage Area:** Greater American Continent (US, Canada, Mexico, and South America)
- **Role:** ANN is the primary source of information for the citizens of the American continent. It portrays the corporations as benevolent protectors and emphasizes stability and security in a post-war world.
- **Tactics:** Uses a combination of patriotic themes and fear-mongering to maintain control over the population. Highlights success stories of corporate interventions and the dangers of dissent.
- **Slogan:** "Keeping America Strong and United"

Eurasian Global News Network (EGNN)

- **Coverage Area:** Eastern Europe and Asia
- **Role:** EGNN serves the dual purpose of promoting corporate agendas while fostering a sense of superiority and progress among its viewers. It showcases technological advancements and infrastructure improvements led by corporations.

- **Tactics:** Employs sophisticated propaganda techniques, mixing factual reporting with corporate interests. It uses cultural references and historical pride to gain trust and influence.
- **Slogan:** "Progress and Prosperity in Unity"

Patriot's Truth

- **Coverage Area:** Various rebel groups and malcontents in every nation
- **Role:** Ostensibly a voice for the oppressed and marginalized, Patriot's Truth covertly spreads misinformation and fuels conflicts to serve corporate goals.
- **Tactics:** Pretends to champion the causes of rebellion and justice while subtly directing rebel actions to weaken opposition to corporate rule. It disseminates false hope and conspiracy theories to keep rebel groups fragmented.
- **Slogan:** "For the People, By the People"

These networks can play crucial roles in your story, driving home themes of control, manipulation, and the power of media. How do these fit with your vision? Is there anything specific you'd like to expand or modify?

The Latin American Front

Jungles on fire...

The Terror Attacks on the United States in 2052

The year 2052 marked a devastating period in U.S. history when a series of coordinated terror attacks shook the nation to its core. These attacks targeted major cities, infrastructure, and government institutions, causing widespread panic and chaos.

Key Events:

- **Cyber Attacks:** Simultaneously, cyber-attacks crippled financial systems, power grids, and communication networks, causing economic and social turmoil.
- **Physical Attacks:** Bombings and armed assaults on key urban centers led to significant casualties and destruction.
- **Biological Warfare:** Some attacks included the release of engineered pathogens, causing long-term public health crises.

Aftermath:

- **Isolation Policy:** In response, the U.S. government enacted strict border control measures, effectively sealing the country off from the rest of the world to prevent further infiltrations.
- **Rise of PMCs:** With traditional military resources stretched thin, PMCs were heavily relied upon to manage border security and internal threats.

Mexico's Downfall into a NARCO State

Mexico's descent into a NARCO state began well before 2052 but accelerated in the chaos that followed the U.S. lockdown.

Key Factors:

- **Power Vacuum:** The weakened state apparatus and rampant corruption allowed drug cartels to consolidate power.
- **Economic Collapse:** The isolation of the U.S. disrupted major trade routes, devastating Mexico's economy and further empowering criminal organizations.
- **Cartel Warfare:** Rival cartels engaged in brutal conflicts for control over smuggling routes, exacerbating violence and instability.
- **PMC Involvement:** PMCs, often hired by both government and cartel factions, became deeply entangled in the ongoing power struggles, further blurring the lines between legal authority and criminal enterprise.

Growing Conflicts in South America

Context

South America, rich in natural resources, became a battleground for corporate interests and local governments struggling to maintain sovereignty and stability.

Major Conflicts

Colombian Resource Wars:

- **Background:** Colombia's vast mineral resources attracted aggressive corporate interest. Local insurgent groups, funded by illicit trade and foreign backers, frequently clashed with corporate PMCs.
- **Key Battle:** The Battle of Bogota (2118), where PMCs used A.P.E. suits to secure mining operations from insurgent control, resulting in significant civilian displacement.

Amazon Rainforest Skirmishes:

- **Background:** The deforestation and exploitation of the Amazon became a major issue as corporations sought to extract valuable resources.
- **Key Battle:** The Siege of Manaus (2120), where environmental activists and indigenous groups fought against corporate PMCs equipped with advanced A.P.E. suits, turning the rainforest into a high-tech battleground.

Brazilian Power Struggle:

- **Background:** Brazil, with its vast agricultural and industrial assets, saw internal strife as different factions vied for control.
- **Key Battle:** The Rio de Janeiro Uprising (2115), where local militias, backed by sympathetic corporations, fought against government forces. A.P.E. suits played a pivotal role in urban combat scenarios.

Venezuelan Oil Conflicts:

- **Background:** Venezuela's oil reserves remained a coveted prize. The country saw continuous conflict as corporate-backed PMCs and local militias battled for control.
- **Key Battle:** The Caracas Offensive (2113), where PMCs used both assault and light class A.P.E. suits to secure oil facilities and infrastructure, leading to prolonged urban warfare.

Operation: Verde Lanza – An In-Depth Look

Overview

Operation: Verde Lanza is a large-scale military initiative launched by the Peruvian government with the aim of securing their borders and deterring aggressive actions by Bolivian forces. The operation is backed by Shadow Company (Green), a renowned PMC under Perseus Solutions, which has significant interests in Peru's mineral wealth and other resources.

The Context of the Operation

Precipitating Factors:

- **Border Intrusions:** For years, Bolivia has been accused of violating Peruvian borders, leading to heightened tensions and sporadic clashes.

- **Resource Control:** The contested regions are rich in valuable minerals, making them highly sought after by both nations and their corporate backers.

PMC Involvement:

- **Shadow Company (Green):** Known for their expertise in rapid, tactical operations, Shadow Company was contracted by the Peruvian government to lead the offensive.
- **The Red Watch (Tan):** In response, Bolivia enlisted The Red Watch, Ogama Corp's infamous PMC, known for their heavy-handed approach and formidable "Ogre" A.P.E. suits.

Key Battles and Tactics

1. Altiplano Skirmishes:

- **Terrain:** The high-altitude plains of the Altiplano provide a challenging environment for combat, with harsh weather and rugged terrain.
- **Strategy:** Shadow Company utilized "Cottonmouth" suits for their agility and stealth, conducting guerrilla-style attacks on Bolivian positions. The Red Watch countered with heavily armored "Ogre" suits, maintaining strong defensive lines.

2. Urban Warfare in La Paz:

- **Combat Environment:** The densely populated city presented a complex battleground, with civilian safety being a major concern.
- **Tactics:** Both PMCs engaged in close-quarters combat, using their A.P.E. suits to navigate the tight urban spaces. Narco terrorists exploited the chaos to further their illicit activities, complicating the situation.

3. Jungle Conflict:

- **Location:** Deep in the Amazon rainforest, where the dense foliage and difficult terrain added to the complexity of operations.
- **Approach:** Shadow Company leveraged their advanced camouflage and mobility, while The Red Watch adapted their "Ogre" suits for environmental challenges, clearing paths and holding strategic points.

Major Impacts on the Continents

North America:

- **Economic Strain:** The U.S., with its isolationist policies, faces economic strain due to disruptions in trade routes and resource availability caused by the conflict.
- **PMC Influence:** The reliance on PMCs like Shadow Company and The Red Watch highlights the increasing role of private military forces in maintaining security and pursuing national interests.

South America:

- **Humanitarian Crisis:** The conflict has led to significant civilian casualties and displacement, exacerbating the humanitarian situation in the region.
- **Resource Control:** The battle for control over mineral-rich territories has intensified, with corporations vying for dominance and influencing local governments.
- **Environmental Impact:** The jungle conflicts have resulted in deforestation and ecological damage, affecting biodiversity and indigenous communities.

Regional Stability:

- **Political Tensions:** The conflict has deepened political rifts between nations, leading to a fragile and volatile regional landscape.
- **Corporate Power:** The prominence of corporations in these conflicts underscores their power and influence, often dictating the terms of engagement and shaping regional policies.

Future Outlook:

- **Prolonged Conflict:** Without a clear resolution, the Bolivia-Peru conflict is likely to continue, drawing in more resources and leading to further destabilization.
- **International Involvement:** Global powers and corporations may increase their involvement, either through direct intervention or by supporting local factions to protect their interests.

Conclusion

Operation: Verde Lanza is a critical flashpoint in the ongoing struggle for power and resources in Latin America. The involvement of powerful PMCs and the underlying corporate interests reveal the complexities of modern warfare and its far-reaching impacts on both North and South American continents. The operation's outcome will likely shape the geopolitical landscape for years to come.
